Commercial Refrigeration Equipment General Specification

SPE ELITE SERIES — MEGA TOP, DUAL SIDED

Dual Sided Prep Table Cabinets are accessible from front and back. Fifty percent greater pan capacity than the all around standard prep table. Features enhanced refrigeration system and new and improved grille system for better airflow and less temperature gradient. Improved design provides better airflow management and uniform temperature distribution throughout the cabinet. Pans are cooled from the bottom, eliminating the necessity of air blanket. Airflow assures that product in open containers is kept below 41°F and above freezing. This translates into increased product shelf life, higher quality food, better food appearance, fresher product and a reduction of bacteria build-up to combat food-borne illnesses.

CABINET CONSTRUCTION

Exterior construction includes heavy-duty stainless steel finish on front, back, sides, top, and door(s). Removable hoods and insulated lid(s) assemblies are made of matching stainless steel.

Doors are mounted to face of cabinet on cartridge style hinges permitting them to self close. Hinges also allow doors to stay open 120°. A plug in type vinyl magnetic gasket is attached to each door for positive seal. Door handles are made from extruded aluminum with a black anodized finish. They are contoured to permit easy opening of doors with fingers from both top and bottom of handle.

Cabinet insulation is CFC and HCFC-free foamed-in-place polyurethane of two-inch minimum thickness. Six-inch casters, 2 with brakes, are standard. 3-inch casters and 6" legs are available as an option.

One (1) 10" deep and one (1) 12" deep, full length removable cutting boards constructed of high-density white polyethylene plastic are supplied with cabinet. These are readily removable for cleaning. Two epoxy-coated steel wire shelves per section are supplied as standard. Pans furnished are 4" deep and made of polycarbonate plastic.

REFRIGERATION

More robust refrigeration system provides added capacity and efficiency. Systems are designed using CFC and HCFC-free R134a refrigerant and capillary tube between condenser and evaporator. Recirculated, forced air from evaporator is moved under pans, which are recessed 2" from top of cabinet. Forced air over the condenser is drawn through grille under door as well as the back and bottom of cabinet. Automatic condensate evaporator is provided to eliminate the need of floor drains.
